TEST SUMMARY REPORT

SauceDemo E-commerce Website – Draft based on screenshots supplied

Application: https://www.saucedemo.com/ **Testing type:** Manual testing **Report date:** 10 November 2026

1. Purpose

This draft summarises the test execution information visible in the screenshots supplied for the SauceDemo QA portfolio. It intentionally does not claim a complete project-wide pass/fail total because the Product Navigation results and a complete final execution export were not available in the screenshots.

2. Scope

The project test case workbook covers Login (10 cases), Product Visibility and Information (6), Product Sorting (5), Product Navigation (4), and Add to Cart (3), for 28 planned test cases.

3. Results visible in supplied screenshots

Area	Visible recorded result	Notes
Login	6 Pass; 2 Retest; 2 Not Run	TC_LOGIN_006 and TC_LOGIN_008 require retesting. TC_LOGIN_009 and TC_LOGIN_010 are Not Run.
Product visibility	Recorded: 5 Pass; 1 Retest	TC_PROD_002 and TC_PROD_005 actual-result descriptions do not demonstrate the named checks; verify and correct before relying on their Pass status. TC_PROD_006 is Retest.
Product sorting	5 Pass	The screenshot shows all five sorting cases recorded as Pass.
Product navigation	Not confirmed	The supplied screenshots do not clearly show all four navigation test results.
Add to Cart	Results appear recorded; exact totals not fully legible	Retest the reported issue for one product and verify the exact product and behaviour.

4. Items requiring correction or retest

• TC_LOGIN_006: repeat the invalid username scenario and confirm the exact mismatch message.

• TC_LOGIN_008: repeat the locked-out account scenario and capture the complete message.

• TC_PROD_002: record the actual observation about all six product names; the screenshot currently shows a navigation-related actual result.

• TC_PROD_005: repeat the image check; the screenshot currently shows a login validation message as the actual result.

• TC_PROD_006: identify the product that reportedly produced an error and reproduce the issue.

5. Defect status

Two potential issues have been listed for investigation: the locked-out login message (TC_LOGIN_008) and an Add to Cart issue reported for one product (TC_PROD_006). They remain unconfirmed until reproducible steps and fresh evidence are obtained.

6. Conclusion

The screenshots show progress across login, product visibility and sorting tests. Before issuing a final test summary, correct mismatched actual-result entries, complete the outstanding retests, confirm the Product Navigation and Add to Cart results, and calculate final totals from the completed execution workbook.
